

MedAssist AI — Medical Documentation Report

Synthetic Academic Test Report

All patient information is fictional and provided for software testing and demonstration.

1. Patient / Document Information

Field	Documented Information
Patient Name	Rohan Mehta
Patient ID	SYN-PT-2026-0047
Age	42 years
Sex	Male
Document Type	Outpatient Observation and Medication Review Record
Document Date	30 September 2026
Encounter Date	30 September 2026
Department	General Medicine

2. Blood Pressure Documentation

Field	Documented Information
Date	30 September 2026
Time	10:15 AM
Position	Sitting
Measurement Site	Left upper arm
Cuff Information	Adult cuff
Systolic Pressure	138 mmHg
Diastolic Pressure	86 mmHg
Pulse Rate	82 beats/minute
Symptoms	Mild headache; no other symptoms documented
Medication Context	Patient reported taking amlodipine 5 mg once daily; exact time of most recent dose not documented

3. Medication Reconciliation

Medication	Strength	Route	Frequency	Verification
Amlodipine	5 mg	Oral	Once daily	Patient-reported
Metformin	500 mg	Oral	Twice daily	Patient-reported
Atorvastatin	20 mg	Oral	Once daily	Patient-reported

Recorded Medication List

Medication	Strength	Route	Frequency
Amlodipine	5 mg	Oral	Once daily

Medication	Strength	Route	Frequency
Metformin	500 mg	Oral	Once daily
Atorvastatin	20 mg	Oral	Once daily

Known allergy: Penicillin

Reported reaction: Skin rash

Medication review date: 30 September 2026

Documented discrepancy: The patient reported metformin 500 mg twice daily, while the recorded medication list states 500 mg once daily. The reason for this difference was not documented.

4. Basic Observation Record

Date	Time	Measurement	Unit	Source	Reported Symptoms
30 Sep 2026	10:15 AM	Blood pressure: 138/86	mmHg	Automated BP monitor	Mild headache
30 Sep 2026	10:15 AM	Pulse: 82	beats/minute	Automated BP monitor	Mild headache
30 Sep 2026	10:20 AM	Temperature: 37.1	°C	Digital thermometer	No additional symptoms documented

Additional observation: Patient was alert and able to communicate during the observation.

5. Documentation Quality Check

Criterion	Assessment	Documented Gap / Note
Clear	Partially documented	Most fields are understandable; some details remain unspecified.
Dated	Yes	Document and encounter dates are provided; observations also include dates.
Specific	Partially documented	BP position, site, cuff and values are recorded, but some measurement details are missing.
Easy to understand	Yes	Information is presented in understandable terms.
Recorded close to observation/review time	Yes	Observation and medication review are dated 30 September 2026.
Unexplained abbreviations	No major issue identified	No unexplained abbreviation requiring clarification was identified in the supplied document.

6. Key Documented Findings

- Blood pressure documented as 138/86 mmHg while sitting, measured on the left upper arm.
- Pulse rate documented as 82 beats/minute.
- Patient reported mild headache at the time of blood pressure measurement.
- Patient-reported medications include amlodipine, metformin, and atorvastatin.
- A penicillin allergy with skin rash as the reported reaction is documented.
- A discrepancy exists between the patient-reported and recorded metformin frequency.
- Patient was documented as alert and able to communicate during observation.

7. Missing / Incomplete Information

- Exact time of the patient's last amlodipine dose.

- Reason for the metformin frequency discrepancy.
- Respiratory rate.
- Oxygen saturation.
- Weight and height.
- Blood glucose measurement.
- Laboratory results.
- Follow-up appointment date.
- Name of the healthcare professional who performed the review.
- Exact blood pressure device/model.
- Whether the blood pressure measurement was repeated.
- Additional details about the reported headache.

8. Conflicts / Discrepancies

- Metformin frequency conflict: patient-reported list states 500 mg twice daily; recorded medication list states 500 mg once daily.
- The supplied document does not state which frequency is correct or why the lists differ.

9. Source-Grounded Q&A;

What blood pressure was documented?

138/86 mmHg, recorded at 10:15 AM while sitting.

What medication discrepancy was documented?

Metformin 500 mg was reported as twice daily by the patient, while the recorded list states once daily.

What allergy was documented?

Penicillin, with a reported skin rash reaction.

10. Medical Safety Notice

This is an academic documentation prototype, not a diagnostic system. The report contains only information documented in the supplied synthetic source. It does not provide a diagnosis, treatment recommendation, medication change, prognosis, risk score, or urgent medical advice.

Documentation status: Partially complete

Reason: Core patient, observation, blood-pressure, and medication information is documented, but several requested fields are missing and a medication-frequency discrepancy remains unresolved.
